SUMMARY

Informatics graduate with freelance and internship experience developing web applications using Laravel, React, and Express.js. Built the backend of a production-tracking PWA used daily by 50-60 staff, with additional project experience in responsive React interfaces and a Go/React music streaming application. Worked directly with a business owner to translate operational workflows into system requirements. Developed ArthaBooks, a double-entry accounting application evaluated through UAT with 32 respondents across 10 SMEs.

EDUCATION

Universitas Atma Jaya Yogyakarta - B.S. in Informatics (S.Kom.) *2022 - 2026*

Faculty of Industrial Engineering, Yogyakarta, Indonesia | GPA: 3.54/4.00

Relevant Coursework: Software Development, Website Application Programming, Object Oriented Programming, Database, Data Structure, Algorithm Analysis.

TECHNICAL SKILLS

Frontend: JavaScript, TypeScript, React, Livewire, Blade, Tailwind CSS, Bootstrap, HTML/CSS

Backend: PHP, Laravel, Go (Fiber, GORM), Node.js, Express.js, REST APIs, WebSocket

Data & Testing: MySQL, PostgreSQL, Redis, SQL query optimization, UAT

Tools & Other: Git/GitHub, Docker Compose (foundational), Flutter/Dart, Gemini/OpenAI API integration

Languages: Indonesian (Native), English (Intermediate)

EXPERIENCE

Freelance Backend Developer - Eagle Jeans Co. (Garment Production Tracking System) *Jun 2026 - Oct 2026*

Remote | Client project for a garment manufacturing business

- Developed the Laravel/Livewire backend for a 15-step QR-code production PWA, organizing business logic into eight services; the system is used daily by 50-60 staff and processes approximately 60-100 production orders per day.
- Implemented access controls for 12 user roles using custom middleware and authorization policies, plus database transactions and row locking for concurrent QR-code generation and production scans.
- Implemented shared file-upload validation and password-reset rate limiting (6 attempts per minute) to mitigate stored-XSS and brute-force risks.
- Reduced database queries on the busiest report page from 45 to 12 (approximately 73%) through query-plan analysis, N+1 query fixes, and targeted indexes.
- Worked directly with the business owner to translate garment production workflows into system requirements and iterate on the delivered application.

Software Developer Intern - PT Aerotek Global Inovasi (Beehive Drones) *Jan 2026 - May 2026*

Software Division, Yogyakarta, Indonesia

- Resolved 12 bugs across core inventory workflows in an internal system used by 20-30 staff.
- Maintained and extended Express.js services supporting 12 inventory modules and contributed to their migration to Laravel using MVC and Eloquent.
- Integrated Gemini and OpenAI APIs with Electron-based internal tooling to generate meal and exercise recommendations from user-provided information.

SELECTED PROJECTS

Spotify Clone - Full-Stack Music Streaming Platform (Personal Project, In Progress) *2026 - Present*
Go 1.26, Fiber v2, GORM, PostgreSQL 16, Redis 7, React 19, TypeScript, Vite, Tailwind v4 | Repos: github.com/Tano11933/spotify-backend (API) · github.com/Tano11933/spotify-frontend (web)

- Developing a React/TypeScript frontend and a Go REST and WebSocket API for a music streaming application.
- Built a layered backend with JWT access and refresh tokens, token rotation, bcrypt, Redis-based rate limiting, and a WebSocket hub; implemented Redis caching for catalog endpoints.

ArthaBooks - Double-Entry Accounting System for SMEs (Undergraduate Thesis) *Jun 2026*
Laravel 13, PHP 8.4, MySQL, Bootstrap 5

- Developed an automated double-entry journal engine supporting SAK EMKM accounting requirements for Indonesian SMEs.
- Implemented three user roles with 13 permissions, five financial reports including Catatan atas Laporan Keuangan (CALK), a payroll approval workflow, and an audit trail.
- Evaluated the application through UAT with 32 respondents across 10 SMEs, achieving a mean score of 4.00/5.00.

Padukuhan Tritis - Village Profile & Information Website *Jul 2025*
React, Vite, Bootstrap 5 | Repo: github.com/Tano11933/dusun_tritis

- Built a responsive React website presenting village information, tourism potential, and a media gallery.

ReuseMart - Multi-Role Second-Hand Marketplace *May 2025*
Team project (3 members) | Laravel, MySQL, Flutter, Dart

- Implemented buyer checkout, delivery selection, reward-point redemption, payment verification, and automatic cancellation with point refunds in a three-person team.
- Developed three downloadable PDF reports covering item donations, donation requests, and consignor transactions.
- Built mobile login and role-based menus, courier profile and delivery tracking, and push notifications for sales and delivery events.

LEADERSHIP & ORGANIZATIONAL EXPERIENCE

Business & Fundraising Coordinator - Kopma Fest *2024 - 2025*

- Led fundraising initiatives that secured IDR 20-25 million through sponsorship proposals, partner negotiation, and sales; coordinated budget allocation across 10 event divisions.

Business & Fundraising Division Staff - Sparkfest#12 *2023 - 2024*

- Identified potential sponsors, prepared pitch materials, negotiated partnerships, and managed event fund allocation.

Security Division Staff - Sparkfest#11 *2022 - 2023*

- Coordinated event safety procedures and crowd control, collaborating across divisions during emergencies.

CERTIFICATIONS & COURSES

JavaScript Developer Certification - freeCodeCamp (2026)

PHP with MySQL: Build 5 PHP and MySQL Projects - Udemy (2025)

Belajar Dasar AI - Dicoding (2025)

Certified Secure Computer User v2 - EC-Council (2023)
